                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to novel, isolated full length human cDNA CC molecules and the encoded proteins thereof. Specifically, it refers to CC cDNA clones obtained by an oligo-capping method, where none of these cclones are identical to any known human mRNAs. The present invention cc describes an immunoassay to identify agonists and antagonists, as well as cantibodies, antisense molecules and siRNAs that can all be used to bind to and modulate expression of the cDNA molecules. As such, these collecules are useful for diagnostic markers or therapeutic targets for creating entiting of the cDNA molecules. As such, these collecules are useful for diagnostic markers or therapeutic targets for creating entiting office, neurological disease, Alzheimer's consecuted as for maintaining equilibrium of sense or motor function, and consecute as for maintaining equilibrium of sense or motor function, and consecute consecuted and transquiliser activities. This polymuclective is a full corporate and consecuted is a full constant and transquiliser activities. This polymuclectie is a full constant in the sequence of the invention, NOTE: This sequence is not consecuted in the sequence isting of the specification but can be obtained on consecution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
The present invention describes an isolated PRO nucleic acid (I). Also described: (I) a vector comprising (I); (2) a host cell comprising the vector of (I); (3) a process for producing a PRO polypeptides; (4) an isolated PRO polypeptide; (5) a chimeric molecule comprising the polypeptide of (4) fused to a heterologous amino acid sequence; (6) an antibody which specifically binds to a polypeptide of (4); (7) a composition of matter comprising a polypeptide of (4), an agonist or antagonist of the polypeptide or an antibody that binds to the polypeptide in combination with a carrier; (8) an article of manufacture comprising a container, a label on the container and a composition of matter of (7); (9) a method of treating an immune related disease in a mammal; (10) a method for determining the presence of a PRO polypeptide in a sample suspected of having the polypeptide; (11) a method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New PRO polynuclectides and polypeptides, useful in useful in diagnosing and treating an immune related disease, e.g. systemic lupus erythematosus, rheumatoid arthritis, diabetes mellitus or asthma and in stimulating an immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            human; PRO; immune related disease; inflammatory immune response; immune response stimulation; antiallergic; antianaemic; antiarthritic; antiasthmatic; antidiabetic; antiinflammatory; antipsoriatic; antitheumatic; antithyroid; CNS; dermatological; gastrointestinal; haemostatic; hepatotropic; immunostimulant; immunosuppressive; muscular; nephrotropic; neuroprotective; osteopathic; respiratory; vasotropic; nephrotropic;
                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   29-OCT-2002; 2002US-0422472P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         13-MAY-2004.

                                                cc diagnosing an immune related disease or an inflammatory immune response cl in mammal; (12) a method of identifying a compound that inhibits or minics the activity of or expression of a gene encoding a PRO polypeptide c minics the activity of or expression of a gene encoding a PRO polypeptide c and (13) a method of stimulating the immune response in a mammal. The CPRO sequences have antiallergic, antiansemic, antiarchritic, antirheumatic, antidabetic, antiinflammatory, antipsoriatic, antirheumatic, antichyroid, CNS, dermatological, gastrointestinal, c antirheumatic, hepatotropic, immunostimulant, immunosuppressive, muscular, c nephrotropic, neuroprotective, osteopathic, respiratory, vasotropic and c virucide activities, and can be used in gene therapy. The nucleic acid c virucide activities, and can be used in gene therapy. The nucleic acid c useful in diagnosing and treating an immune related disease and in c stimulating an immune response. The present sequence represents a human c PRO nucleotide sequence from the present invention.

Sequence 13696, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSITITE OF INVENTION: WITH HUMAN DISEASE, METHODS OF FILE REFERENCE: CLOOL307

CURRENT PILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOSTWARE: FASHSEEQ for Windows Version 4.0

SEQ ID NO 13696
                                                                                                                    밁
                                                                                                                                                 S
                                                                                                                                                                                문

Sequence 5044, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF TITLE REFERENCE: CLOO1307

CURRENT APPLICATION NUMBER: 00/241,755

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR FILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTMARE: FastSEQ for Windows Version 4.0

SEQ ID NO 5044

LENGTH: 1785

TYPE: DNA

ORGANISM: Human

TITLE OF INVENTION: POLYNUCLEOTIDES ENCODING NOVEL SECRETED PROTEINS
FILE REFERENCE: GIN 6402
CURRENT APPLICATION NUMBER: US/09/822,830A
CURRENT APPLICATION NUMBER: US/09/822,830A
CURRENT FILING DATE: 2001-03-29
PRIOR APPLICATION NUMBER: 600/195,604
PRIOR APPLICATION NUMBER: 600/195,604
PRIOR APPLICATION NUMBER: 601/195,604
PRIOR FILING DATE: 2000-04-06
NUMBER OF SEQ ID NOS: 631
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 49
LENGTH: 2176
TYPE: DNA
ORGANISM: Homo sapiens
                                                                                                                                                                                                                                                                                                                                                       RESULT 5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  973
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Patent No. US20020142952Al

GENERAL INFORMATION:

APPLICANT: Genetics Institute, Inc.

APPLICANT: Wong, Gordon G.

APPLICANT: Clark, Hilary

APPLICANT: Fechtel, Kim

APPLICANT: Howes, Steven H.

APPLICANT: Howes, Steven H.

APPLICANT: Graham, James R.

IITLE OF INVENTION: POLYNUCLEOTIDES ENCODING NOV

FILE REFERENCE: GIN 6402

CURRENT APPLICATION NUMBER: US/09/822,830A

CURRENT FILING DATE: 2000-04-06

NUMBER OF SEQ ID NOS: 631

SOFTWARE: Patentin Ver. 2.0

LENGTH: 2273

TYPE: DNA

ORGANISM: Homo sapiens
                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                           á

Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a Genoscope.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 (bases 1 to 2314)
